Welcome to #streamlined.

Recognized as a Top 100 Healthcare Technology Company by Healthcare Technology Report, PaceMate is one of the nation's fastest-growing companies in cardiac rhythm management software and remote monitoring. Combining the most technologically advanced cloud-native software, research-grade data, and seamless integrations, PaceMateLIVE™, the company's flagship remote monitoring software platform, is enabling many of the nation's most renowned electrophysiologists, device clinics, and healthcare systems to effectively manage their device patient populations. With PaceMate, healthcare organizations can experience comprehensive interoperability and secure data exchange—significantly improving patient outcomes, reimbursements, and productivity.

Experience Uniquely Powerful EHR Integration

PaceMateLIVE offers clinics integration with all EHRs, minimizing data entry dramatically and streamlining workflows. Additionally, PaceMate's remote monitoring platform has been fully validated by the three leading EHRs—Epic, Cerner, and athenahealth—enabling unmatched, robust FHIR API integration for all clinics within those three networks. PaceMateLIVE integration with Epic, Cerner, and athenahealth automatically pulls patient matching with 100% accuracy and pushes clinical documentation, orders, and encounters in real time on every report.

Capture Lost Reimbursement Revenue

No other RPM software company allows you to earn and keep more of your reimbursement dollars. Most clinics struggle to capture 20% of potential remote monitoring revenue. With PaceMate's automated billing and claims processing, our customers average 75% revenue capture in just six months of use, and 3X their current device clinic operating income.

clinic operating income

Maximize Operational & Workflow Efficiencies

With PaceMateLIVE, physicians' alert burden is reduced by 30%. Our proprietary one-step e-sign+next feature and customizable alert settings cut review time and increase efficiency. All data from implantable + wearable devices is located in one dashboard, with urgent alerts auto-triaged to the top of the workflow. With our FHIR API integrations with EPIC, Cerner, and athenahealth, we eliminate 99% of billing and coding work.

Reduce physician alert
burden by 30%

Improve Patient Care with Automatic Clinical Prioritization

Our proprietary alert rules engine automatically triages every report received by the PaceMateLIVE platform. These dynamic algorithms live within the PaceMateLIVE software and can be customized for each device type and also tailored for each patient, doctor, or practice. The PaceMate alerts engine allows clinicians and doctors to have peace of mind, knowing they'll get the insights they need before they need them.
